

20 COVID “PANDEMIC” & VACCINE FACTS

1. There NEVER was a naturally occurring COVID-19 pandemic.
2. “Pandemic” is defined as: An exceptionally widespread epidemic: a disease or outbreak that affects very high proportions of the population or populations throughout the world.
3. The COVID-19 data gathering that created the so-called “pandemic” was a misrepresentation. Neither the global nor the United States mortality rates were any higher during 2020 than in 2018 (however, all-cause mortality rates did increase after COVID-19 shots were rolled out and especially after they were mandated).
4. Case counts of COVID-19 were based on manipulating the PCR test cycle threshold (CT), creating an artificially large number of people said to have COVID-19.
5. The COVID-19 diagnosis should be based on clinical symptoms and not solely on faulty PCR test results. Therefore, the true number of COVID-19 cases is unknown.
6. The PCR test was never designed to diagnose anything. Furthermore, a PCR Test cycle threshold (CT) above 24 typically would create an extraordinarily high number of false positives. In most jurisdictions, the government ran PCR tests at a CT of 40.
7. By March 2020, doctors and scientists from around the world had already established safe and effective treatments for the COVID-19 condition. Unfortunately, despite significant scientific and clinical evidence, these doctors and scientists were ignored and censored.
8. Those with vitamin D levels of at least 50 ng/ml had reduced rates of hospitalization for the COVID-19 condition.
9. Vitamin D/K2, zinc and copper, quercetin, HCQ, N-acetylcysteine, vitamin C, ivermectin and inhaled steroids were highly effective treatments for patients with COVID-19 conditions. All helped reduce morbidity and mortality in those who received early treatment during their influenza-like illness.
10. The survival rate for COVID-19 was 99.9% in most of the population. Mortality was higher in the elderly population and in patients with significant co-morbidities (e.g., obesity, diabetes, and low vitamin D levels).
11. No “vaccine” was ever needed because safe and effective treatments were widely available.
12. The COVID-19 injections are not vaccines. They are countermeasure prototype military bio-warfare agents owned by DOD until injected. Mounting evidence also shows that these mRNA gene therapies can alter human DNA.
13. The COVID-19 injections never were successfully, scientifically proven to behave like vaccines. mRNA technology never was used to prevent any illness in the past. Moreover, we see now that the mRNA injections for COVID-19 conditions can cause illness and death.

14. COVID-19 injections were not appropriately examined for safety. Full disclosure in package inserts of the injection contents has not occurred.
15. Data from the COVID-19 injections clinical trials were hidden from the public along with the large number of associated adverse events and deaths.
16. The COVID-19 injections have caused unprecedented numbers of deaths and severe adverse events: heart attacks, strokes, blood clots, myocarditis, birth defects, sudden adult death, autoimmunity, cancer, miscarriages, stillbirths, infertility, and neurological disorders including Bell's Palsy, dementia, and Guillain–Barré Syndrome. Long-term study outcomes are not available.
17. The COVID-19 injections were authorized under the EUA (Emergency Use Authorization) and could only be administered to the public if safe and effective alternative treatments were not available. The fact that safe and effective treatments were available but banned and censored explains the use of underhanded and coercive policies to administer these unsafe, unproven, poorly tested, and deadly COVID-19 injections to everyone.
18. Mainstream news sources, government agencies, medical institutions, and the manufacturers themselves have NOT reported the unprecedented numbers of deaths and adverse events from the COVID-19 injections.
19. Patients admitted to hospitals were and still are subjected to protocols driven by COVID-19 related incentive payments through the CARES Act, insurance incentives, and the threat of being fired. The use of remdesivir continues to have deadly outcomes.
20. For the first time in history healthy people were quarantined. The COVID lock-down measures, masks, social distancing, and the closing of all but essential businesses, did far more harm than good.
